CARRYING THE TREASURE

The goal of this activity is to do something challenging together and enjoy it. Students stand in a circle, very close to each other. It is better if there isn´t someone very tall and very short standing next to each other. Once the students in the circle are ready, everybody stretches their arms in front of them with palms up to the sky. Then they cross their arms with the person who is next to them (on both sides). After that they bend their arms. The task is to take something precious and pass it round without dropping it. You can call it a treasure and it´s recommended to experiment with objects of different sizes and shapes which can be found outdoors (a cone, a small stone, a branch etc).If it is too easy for your students, ask them to do it as fast as possible.
